

Workshop on nutrient data monitoring

Specific needs to support the development of a market for recycled nutrients

Vincent Delvaux
EU COM, DG GROW D.2

Ghent, 4 September 2015

Our strategy

- *Main objectives of the revision*
 - **Create a level playing field for all fertilisers,**
 - **Substantial contribution to the circular economy**
- *The current Regulation (EC) No 2003/2003*
 - **Organic based fertilisers encounter barriers circulating on the EU market**
 - **For inorganic EC fertilisers**
 - The registration procedure is opaque and extremely slow, and
 - Safety of fertilisers is a source of concerns
- *Regulatory technique*
 - **The New Legislative Framework – defines recovery rules and essential requirements**
- *Expected results*
 - **Creation of new value chains, structural changes**

Our strategy

- *Main objectives of the revision*
 - **Create a level playing field for all fertilisers,**
 - **Substantial contribution to the circular economy**
- *The current Regulation (EC) No 2003/2003*

 - **For inorganic EC fertilisers**
 - The registration procedure is opaque and extremely slow, and
 - Safety of fertilisers is a source of concerns
- *Regulatory technique*
 - **The New Legislative Framework – defines recovery rules and essential requirements**
- *Expected results*
 - **Creation of new value chains, structural changes**

Why nutrient data monitoring?

- *For decision support on investments*
 - **Where are the available biomass or industrial by-products? In which amounts ? What are the amount of nutrients (not only P!) in each of them?**
- *To monitor progress made in the recycling of nutrients*
